

CHETVERIKOV NIKITA

FULLSTACK DEVELOPER

ABOUT ME

Highly experienced Fullstack Developer with over 6 years in building and optimizing web applications. Expertise in microfrontend architecture, performance optimization, and real-time app development. Skilled in leading teams and streamlining workflows using modern tools and technologies. Passionate about automating processes and developing Telegram mini-apps.

WORK EXPERIENCE

- **cryptocalendar.ai, t.me/candle_clash_game_bot, zavshop.ru, plywoodmarket.ru**

Fullstack Developer

- Full Development Cycle: Led all stages of the development process, ensuring high-quality delivery and timely execution.
- Frontend: Built a modern, responsive UI using React and Chakra UI, focusing on user experience and design consistency.
- Backend: Developed a scalable backend with Nest.js and PostgreSQL, implementing secure and efficient APIs for seamless integration with the frontend.
- Deployment & DevOps: Automated deployment processes with Docker and Kubernetes, enabling scalability and streamlined operations. Configured SSL certificates via Let's Encrypt and optimized request handling using Nginx, enhancing security and performance.
- Monitored system performance with modern tools to ensure stability and reliability.
- Cryptocurrency Integration: Implemented blockchain interactions, transaction processing, and wallet management features tailored to the cryptocurrency domain.

- **RBC Pro - pro.rbc.ru**

Senior Frontend Developer

- Migrated a legacy project to Next.js, improving SEO and increasing organic traffic by 15%.
- Optimized critical rendering, reducing load times by 20% through code splitting and server-side rendering (SSR).
- Set up CI/CD pipelines with Docker and GitHub Actions, cutting release times by 30%.
- Designed microfrontend architecture for independent module development.
- Developed WebSocket-based modules using Centrifugo for real-time event handling.
- Integrated Sentry and Jaeger for error monitoring and request tracing, enhancing debugging efficiency.
- Led a team of four developers, conducting code reviews and retrospectives.

- **YLab - ylab.io**

Frontend Developer

- Developed and maintained reusable components, speeding up interface assembly.
- Achieved 90% code coverage with Jest and Cypress, reducing bugs.
- Integrated libraries for SSR/SSG, reducing render times.
- Coordinated with PHP, Java, and Python teams to synchronize releases.

- **Studio Shodwe**

Frontend Developer

- Set up SEO optimization, increasing site traffic by 20%.
- Developed plugins on RNR and optimized MySQL queries.
- Configured analytics and security monitoring, improving safety and performance.
